**Lead-free colorations  
for opaque or translucent  
glass and tile applications  
— from UltraGlas®**

**UltraGlas' high-fire Monolithic Color Process** fuses color into the body of the glass for permanent adhesion — color won't separate or fade. Color pairs have been coordinated in lighter and more saturated shades for continuity. Components may be specified for all appropriate applications (including tile) in any of the lustrous standard colors shown\* — and may be designated for either translucent or opaque results.

Custom colors may also be formulated when more precise continuity is needed (matching fee applies).

*\* Please note that color reproduction on this page may not be accurate.*

For true color, please request a color sample by contacting our customer service department at 800.777.2332.

For more information, visit [UltraGlas.com](http://UltraGlas.com) — or contact UltraGlas directly.
