# appliques in **UltraGlas**

***Decorative appliques offer another artful dimension to architectural glass design.***

***From the understated to the extraordinary*** — many types of decorative materials may be applied to UltraGlas components. Glass “jewels” are very popular — and are available in a wide variety of sizes, shapes and colors (see the amber pendant-shaped jewels applied to the back silvered “crown” on page 1 and the round jewels in the center figure above). UltraGlas has also incorporated many more unusual materials, such as bent copper tubing (see above left) and die-cut and finished copper sheeting (above center). Hand-made roundels, such as the circular blue component (above right), used in conjunction with amber colored frit (fractured glass), provide an elegant touch. A long list of materials may be considered.

***UltraGlas is eager to work side by side with discerning design professionals in the creation of architectural excellence*** — the incorporation of dimensional appliques is yet another means through which UltraGlas may help to bring the designer’s vision to more radiant life.
