custom UltraGlas solutions

UltraGlas, Inc. is a world leader in glass technology — having been responsible for many new discoveries and innovations since first introducing slumped glass technology to the U.S. architectural community in the mid 1980's. UltraGlas is proud of its reputation as a “can do” company. UltraGlas continues to extend the boundaries of glass and design technology and is eager to work with forward-thinking design professionals to enhance the beauty and function of their spaces.

UltraGlas is, first and foremost, a “designable” medium — components may be created to complement virtually any concept, design, theme, motif and color palette — offering architects, designers and builders an expansive palette of decorative and functional opportunities. Virtually anything that can be conceived can be artfully interpreted in UltraGlas. Components can thus reflect an overriding theme by incorporating subtleties from adjacent architectural elements.

The range of custom possibilities is virtually infinite — most shapes (including irregular shapes), sizes (up to 69-1/2” x 119-1/2”), thicknesses (up to 3/4”), glass tints, applied or fused colors (translucent or opaque colors may be specified in selective area or across an entire piece), special finishes (including all manner of appliques) and edge treatments may be specified. UltraGlas can incorporate custom textures and/or designs to complement virtually any theme or motif. Textures can be original and unique, or mimic a fabric, texture, pattern or design. UltraGlas can be tempered, heat strengthened, bent, laminated, dual glazed, frosted and silvered — making it applicable for virtually all conditions and installations. UltraGlas components meet or exceed codes for safety glass and can be configured to accommodate most all hardware choices. Dimensional UltraGlas is an ideal solution for virtually all architectural glass applications.

UltraGlas is eager to work with discerning professionals in the creation of architectural excellence — while continuing to extend the boundaries of glass and design technology and aesthetics. For more information, examples and ideas, please visit **UltraGlas.com**.
