Stair Treads in UltraGlas

UltraGlas stair treads provide safe, distinctive alternatives to more traditional materials:

Seventeen **standard flooring textures** from which to choose; **Custom embossed solutions**, can be created to coordinate precisely with your visions; **Sizes, shapes** and laminated **thicknesses** may be specified; **Color choices** include clear and low-iron (very clear) glass, a variety of glass tints (through-body glass colors), fired-in translucent and opaque colorations — as well as interliner color and opacity options; For **back-lit applications**, UltraGlas may be specified in clear or colored translucent choices; Many **decorative finishes**, such as silvering, metallic leafing and frost may be added to the underside of the glass; **Edge-lighting** of UltraGlas treads further enhances safety and creates elegant results — edge lighting also accentuates the textural surface of the treads; Other UltraGlas components (like balustrades and door lites) may be **precisely coordinated** with your stair tread choices.

Functional attributes make UltraGlas a great choice for any architectural stair environment:

Translucent stair treads provide a **brighter, safer stairway environment**, by allowing light to transmit through them; **Privacy** is achieved as imagery seen through the glass is distorted by the textural nature of the surface; suspended UltraGlas stair treads are laminated, in all thicknesses and strengths, to **meet building code strength requirements** (opaque treads may also be installed directly atop thinset or mastic); Textured UltraGlas treads provide grip, satisfying the “**non-skid**” requirements of building codes; UltraGlas is **non-porous and non-abrasive** and **requires very little maintenance**.

UltraGlas is always eager to collaborate with discerning design professionals in the creation of glass components that stand apart from the rest. What may we do for you?
