**Important Notes:** this page is intended for information only — not for color accuracy. Colors may not display on your monitor, or output from your desktop printer accurately.  
For accurate color, please request a tint sample — 800.777.2332  
Color saturation is also effected by glass thickness — thicker glass intensifies color.  
**Glass Tint Alternative:** UltraGlas offers a wide variety of fired-in, permanent, translucent glass colorations, which contain no lead. Custom colors may be specified to coordinate with color palettes — visit [UltraGlas.com](http://UltraGlas.com) for more information.
