*Advantages of
Obscure Glass in
**Architectural
Wall Design***

UltraGlas textures and designs provide distinct advantages in wall applications

When **privacy and light transmission** are both important — UltraGlas is a great solution, as its textures and designs **distort imagery seen through them** (providing privacy), while allowing light to transmit freely. UltraGlas is **non-porous and non-abrasive**. It is made by re-forming regular glass (not by abrading it), so its integrity has not been eroded. UltraGlas textures **camouflage signs of public contact** and require **far less maintenance** than other materials.

UltraGlas offers vast capabilities to uniquely complement your intended space

The company employs a wealth of inter-related options that can enhance your unique visions. Options include: **Size** (individual components can be configured up to 69-1/2" x 119-1/2"); **shape** (including unusual shapes); **thickness** (up to 3/4"); many standard **textures and designs**; **custom embossed designs and patterns** for totally unique and site-specific solutions; **glass tints** (through-body glass colorations); **opaque or translucent fired-in colorations** — these are both **permanent and lead-free** (custom matching is available); and a range of **decorative finishes**, including **appliques**. All UltraGlas components can be configured to accommodate your choice of installation **hardware** — and all UltraGlas components **meet codes** for safety glass.

UltraGlas is eager to collaborate with design professionals in the creation of glass solutions that do far more than complement brilliant design. What may we do for you?
